PROFESSIONAL SUMMARY

Data Science student at Robert Gordon University with hands-on experience in computer vision application development, data analytics, full-stack web engineering, and UI/UX prototyping. Demonstrated capability in deploying real-time vision system architectures, building scalable MERN applications, and engineering interactive business intelligence dashboards. Proven track record of working effectively in project teams and resolving complex system blocks across software and data frameworks.

EDUCATION

Robert Gordon University, BSc (Hons) Data Science

2024 – Present

Aberdeen, Scotland, UK • Currently in Second Year of study

- Relevant Modules: Data Analytics, Software Engineering, Web Development, Database Systems

PROJECTS

Computer Vision Hand-Gesture Game Controller

Recent

- Developed a real-time computer vision system utilizing a standard webcam to interpret and translate hand landmarks into active gameplay inputs for Hill Climb Racing.
- Configured deep landmark frame tracking to map open-palm gestures to accelerate (gas) inputs and closed-fist positions to decelerate (brake) actions.
- Implemented OS-level hardware input simulation with DirectInput APIs to cleanly bypass software restriction layers inside low-level application hooks.
- Isolated execution boundaries across detection, framing classification, key injection, and window-focus states to debug complex low-level message-passing system bottlenecks.
- **Tech:** Python, OpenCV, MediaPipe (Hand Tracking), DirectInput APIs, Computer Vision

Full Stack Web Application – MERN Stack

Recent

- Developed a full-stack web application using MongoDB, Express.js, React.js, and Node.js (MERN framework).
- Implemented MongoDB as the database layer with secure server-side token authentication and JWT-based session management.
- Built structured RESTful API endpoints and a highly responsive React frontend with component-based architecture.
- Systematically debugged complex JWT session architectures and resolved server-side token authentication blocks to enforce robust access security.
- **Tech:** MongoDB, Express.js, React.js, Node.js (MERN), JWT, REST APIs, Git

Junior Data Analyst – University Data Analytics Assessment

Recent

- Performed data cleaning, structural transformations, and comprehensive exploratory data analysis on various structured datasets.
- Designed and developed interactive Power BI dashboards to clearly visualize critical performance indicators and business metrics.
- Effectively normalized duplicate entries inside raw relational datasets to guarantee analytical accuracy and minimize reporting anomalies.
- Applied strategic data storytelling techniques to clearly communicate analytical findings and data-driven trends to academic assessors.
- **Tech:** Power BI, Excel, Data Analytics, Exploratory Data Analysis, Data Visualization

UI/UX Prototype – KLT Group Client Brief

Grade: B

- Collaborated in a project team to design a high-fidelity prototype matching the KLT Group client brief using Figma, successfully managing critical milestones.
- Conducted user research, designed clear wireframes, mapped operational user flows, and engineered interactive mockups.
- Applied strict UX principles including web accessibility standards, usability frameworks, and human-centered design.
- Successfully managed tight operational deadlines by structuring repetitive team performance rehearsals to deliver a polished presentation within a 5-minute limit.
- **Tech:** Figma, Wireframing, User Flows, UX Research, High-Fidelity Prototyping

ACHIEVEMENTS & CERTIFICATIONS

Deloitte Australia – Data Analytics Job Simulation

Issued May 2026

Forge Virtual Internship

- Completed a comprehensive program focusing on rigorous data evaluation, insights formulation, and targeted communication strategies for non-technical stakeholders.

HP LIFE – Data Science & Analytics Certification

Issued May 2026

Professional Frameworks

- Formally certified in modern data collection frameworks, investigative analytics methodologies, and operational data architecture techniques.

TECHNICAL SKILLS

Computer Vision & ML:	OpenCV, MediaPipe (Hand Tracking), Landmark Frame Tracking, Computer Vision Architectures
Data & Analytics:	Power BI, Data Visualisation, Data Cleaning, Exploratory Data Analysis, Excel
Web Development:	MongoDB, Express.js, React.js, Node.js (MERN Stack), HTML, CSS, JavaScript
Programming & Tools:	Python (basic), SQL, JavaScript, DirectInput APIs, Git, GitHub, VS Code, Postman, Atlas
Design & Prototyping:	Figma, Wireframing, User Flows, High-Fidelity Prototyping, UX Research
